**METHOD OF MANUFACTURING A BATTERY INCLUDING POSITIVE
ELECTRODE, A NEGATIVE ELECTRODE AND AN ELECTROLYTE LAYER**

Examiner: Yuan

S.N. 09/811,898

Art Unit: 1745

October 14, 2004

Detailed Action

1. The Applicant's amendment filed on August 9, 2004 was received. Claims 19,20 were cancelled. Claim 18 was amended.
2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on April 28, 2004.

Claim Rejections

3. The claim rejections under 35 U.S.C. 103(a) as obvious over Miyazaki et al. and Sasayama et al. on claims 17-20 are withdrawn because the independent claim 18 has been amended. The claim rejections under 35 U.S.C. 103(a) as obvious over Miyazaki et al., Sasayama et al. and Kaido et al. on claim 4 have been withdrawn because the independent claim 18 has been amended.

Reasons for Allowance

4. Claims 4-18 are allowed. The invention of independent claim 5 recites a method of manufacturing a battery comprising the steps of (a) intermittently forming an electrode mixture layer, (b) attaching a terminal to an electrode collector exposed region, (c) forming the electrolyte layer on at least a region where the electrode mixture layer is formed, (d) forming the

electrolyte by delivering electrolyte with an electrolyte-delivering machine having a pressurization means, and (e) cutting the electrode collector between the electrode mixture layer which is intermittently formed. The closest prior arts of record, Miyazaki et al., Sasayama et al. and Kaido et al., do not teach or suggest the formation of the electrolyte layer by using an electrolyte-delivering machine having a pressurization means. The invention of independent claim 18 recites a method of manufacturing a battery comprising the steps of (a) forming an electrode mixture layer on a first region but not on an exposed region of an electrode collector, wherein the electrode collector is cut between the electrode mixture layer which is intermittently formed, (b) attaching a terminal to the exposed region wherein the electrode mixture layer is not formed on the exposed region, and (c) disposing a protection tape after the terminal is attached to the electrode collector exposed region. The closest prior arts of record, Miyazaki et al., Sasayama et al. and Kaido et al., do not teach or suggest the electrode collector is cut between the electrode mixture layer which is intermittently formed as stated in the claim.
